

Helicopter Safety

Only approach and exit from the front

In full view of the pilot, staying as low as comfortable, never go to the rear of the helicopter towards the hot exhaust and tail rotor.

Do not raise your hands above your head

All loose items such as hats and scarfs must be removed or secured before approaching the helicopter. Place any bags at your feet. The ground crew will assist and help you carry small children to the helicopter. Always keep the child's head at your shoulder height.

Enter between the helicopter and floats

Enter the helicopter by walking between the floats and the aircraft. Do not stand on the floats as you enter or exit.

Seat belts must be fastened at all times

To open, lift up the cover/face plate.

The door is your emergency exit

Everyone in the helicopter has a door, this is your emergency exit. To open, lift the handle and slide forward. Do not to slam or let the wind catch the doors when opening.

Life jackets must be worn at all times

Life jackets must be worn by all passengers on flights over water. The life jacket will be fitted around your waist before flight. In the unlikely event that we will need to land on water, everyone will be required to put on their life jacket after landing as a precaution. To put on your life jacket - remove headset, undo seat belt, lift the orange tag up over your head, two red inflation tabs will now be visible. Only pull these two red inflation tabs OUTSIDE the aircraft. Life jackets also have a whistle, light and two manual inflation tubes.

Do no throw any object from the helicopter

Never throw objects from the helicopter and keep your hands inside the helicopter at all times.

No smoking

On or within 15m of the helicopter at anytime (or within fenced area).

Safety Equipment

A First Aid Kit, Fire Extinguisher and ELT with GPS are on board for your safety.

Never touch any flight controls & switches

After your flight remain seated

Until instructed to leave the aircraft by the pilot or ground crew.
